

## The Last Lecture Paper

I think many things that Randy talked about resonated with me. I have put a tremendous amount of thought into what I want to do for a career. My career has been something very important to me for a long time. Since I was child, I've thought about many different career paths. When I was young, I wanted to be a teacher. I later realized I wanted to pursue design. It started with interior design and later became graphic design. But I've know for a long time that I wanted to do something creative. I've been making art since I was 12 years old. Since then is when I knew I wanted my career to relate that. So I can understand where Randy is coming from with his goals he had his entire life. I don't have an entire list of exact things he wanted, but I can still relate! I think what affected me the most from the Last Lecture was dealing with legacy and having a meaningful impact on other people. I think it is important to me to have an individual impact, rather than a large gesture. This could always change in the future, but I value personal connection rather than trying to appeal to a crowd. So I think in that way I am different from Randy and what was important to him.

## Learning Styles

I think that learning styles can be important for some people and some instances. I think it's important to know what learning style is good for you. But it's not the end all be all. Sometimes learning is an amalgamation of learning styles. It's not just one thing, but many things working in tandem to learn what you need to learn. It looks different for everyone. Personally, I learn better with visual and tactile learning styles. For instance, watching a video on how to do something so I can get a general idea of how to do it, and then actually doing it after that. I can get the general concept, and then do it myself and learn from my mistakes. That is the best way I can learn

something. But that does not always work. When it comes to things like science with things I can do myself like chemistry, reading and writing is better for me. I like to get hands on experience but when that is not available, my learning style can adapt and change. It really is on an individual basis. With the individual person and the subject matter.
